Melissa Mays was feeling fed up.

October 4, 2016 ·

I think I'm going to start a little series called "Blaming the Victims: The Lies our County, State and Federal Government Tell about Flint."

Episode 1: "LIE: Flint is full of dumb and dirty people who get sick because they're not bathing and washing their hands."

Shame on you people for saying garbage like that just to try to throw off the fact that the bacteria in our water is making us sick. On top of the heavy metals and disinfection byproducts that all cause gastrointestinal distress. I'm ready to turn those shaming tables back around on you. [#ItsYourTurnNow](#)

What is shigellosis?

Shigellosis (shih-gel-O-sis) is an infectious disease caused by a group of bacteria known as *Shigella*. Shigellosis is one of the most contagious types of diarrhea caused by bacteria. It is a common cause of waterborne outbreaks in the United States, though most of these outbreaks occur in recreational water rather than in drinking water.

For more information about shigellosis and treatment, please visit CDC's [Shigella](#) website.

Where and how does *Shigella* get into drinking water?

Shigella is found in every part of the United States and throughout the world. The bacteria can enter the water through various ways, including sewage overflows, sewage systems that are not working properly, and polluted storm water runoff. Wells may be more vulnerable to such contamination after flooding, particularly if the wells are shallow, have been dug or bored, or have been submerged by floodwater for long periods of time.

How can I find out whether there is *Shigella* in my drinking water?

If you suspect a problem and your drinking water comes from a private well, you may contact your state certification officer or for a list of laboratories in your area that will perform tests on drinking water for a fee.

Ayeesha Green I saw an article today about bacteria caused by not washing your hands. I was like, what? What do they expect from that dirty ass water? You're screwed if you wash, and you're screwed if you don't.
